Look-alike pairs: 20-pair spot check

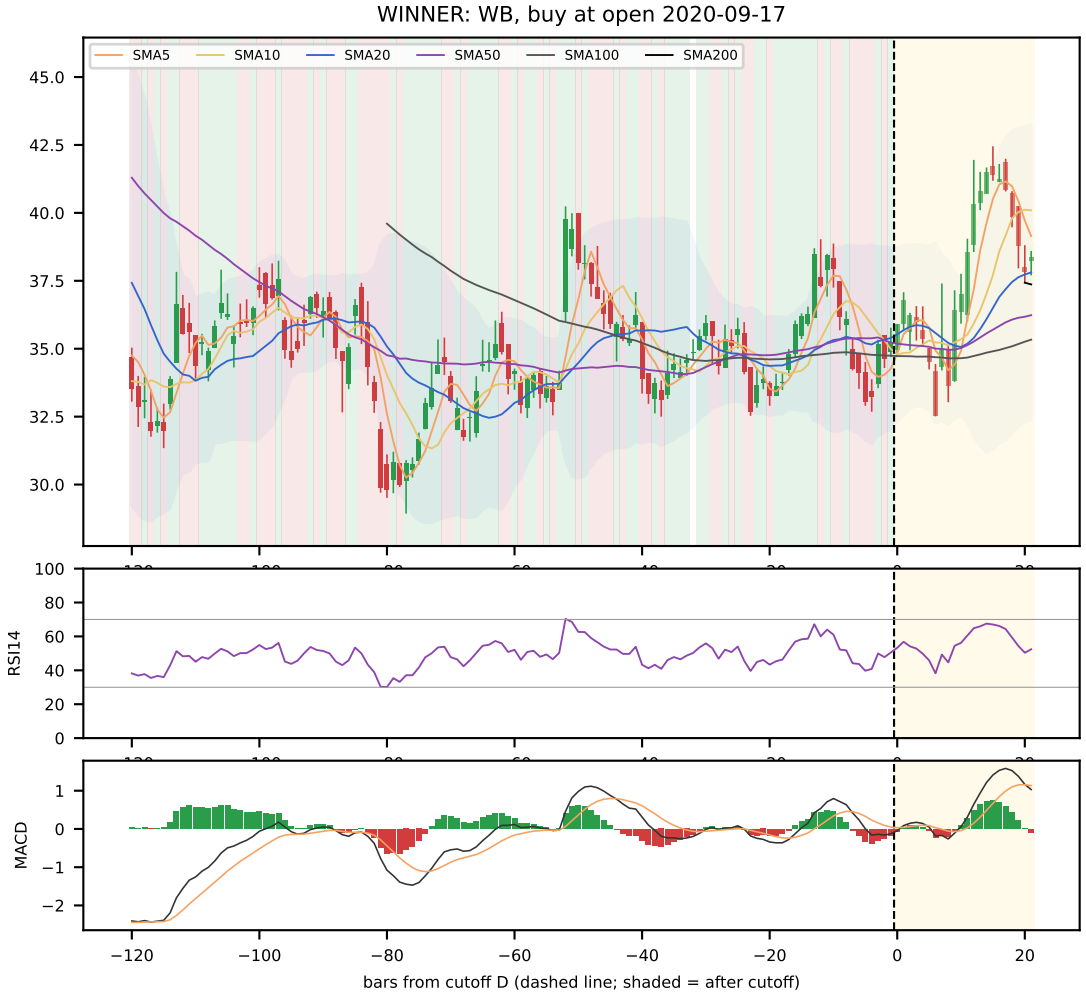

PRACTICE 2020–24 HINT DATA ONLY. No 2025+ data used.

Source: pair_diffs.csv.gz (fixed v2 pairing, 25,128 pairs). Random pick: seed 20261023, 5 per setup (chartpass_all6, q5_in_all6, q7_in_all6, q8_in_all6).
Each page: same setup, same day, two look-alike stocks. Left = the winner, right = the loser (by the 10-day label).
Story at top uses only the days BEFORE the dashed line (cutoff D). Buy = open of day D. Shaded yellow = what happened after.
10-day result: net % after 30bp/side fees, and 'vs avg' = excess over matched controls (the label).
EXIT_RULE_V1: sell at +20% if hit (gap fills at open), no stop, otherwise sell at day-15 close, 30bp/side.
Chart panels: candles + moving averages (SMA5–200) + Bollinger band, RSI14, MACD. Green/red shading = up/down day runs.
Question to ask on each page: do the two charts really look alike before the line? If yes, the pairing did its job.

Pair 1/20 · chartpass_all6_001078 · setup chartpass_all6 · PRACTICE 2020–24 HINT

Winner WB before buying: went roughly sideways over the 2 months before (-0%); then kept falling in the last 2 weeks (-7%); 7 of the last 10 days were red; 11% below its 6-month high; fairly jumpy.

Loser CORT before buying: went roughly sideways over the 2 months before (+5%); then kept falling in the last 2 weeks (-11%); 5 of the last 10 days were red; 12% below its 6-month high; very jumpy.

Winner WB: 10-day +3.5% net, +5.1% vs avg → WIN on 10-day label | EXIT_RULE_V1: +19.4% (WIN, hit +20% on day 13)

Loser CORT: 10-day -2.4% net, -0.7% vs avg → LOSS on 10-day label | EXIT_RULE_V1: -0.3% (LOSS, sold at day-15 close)
